Software Development 1

**Questions:**

1.4 - Hertz

2.1 - On .java file

2.5 - On .java file

2.6 - On .java file

2.9 - On .java file

**Short Essay:**

Agile Development is better for working on products while putting out parts at each time for the product. This is faster and better for working on products that are already out in the public and adding new parts. The Waterfall Model is better for larger products that are in development that allow the developer a flowchart to go back to different steps and test and develop the product further.
